DESCRIPTORS: *Germanium, Recovery, *Metallic

*Crystal lattice defects, Dynamics, Shear stresses.

According to slip line observations the dynamic
recovery of germanium (stage III of the stress-strain
curve) is due to edge dislocation climb. The initial
stress τ_{III} as a function of temperature and rate can be
derived from a theory by Weertman. (Author)

citric acid production. Among 26 investigated strains
half were producing citric acid with a yield of above
50% in relation to sucrose used in the medium. Three
strains among them were quite highly active in citric
